

Multi-Cloud Automation and Data Management in one place

Morpheus provides unified orchestration for multi-cloud automation and application life cycle management. This includes integration with Rubrik's Cloud Data Management platform for automated backup, instant recovery, search, data archival, and more

Everyone is now a software company, but not everyone is good at it

Over 80% of businesses expect to have DevOps and Cloud-first processes in place by 2020 but unfortunately, it can still take weeks for IT to deliver new services to developers. The result?

- High costs and lack of visibility
- Security and governance blind spots
- Brittle approaches to automation
- Poor application life-cycle management

Morpheus was built by practitioners to solve real-world problems

Just like Rubrik, Morpheus was designed to be 100% agnostic from day 1. The Morpheus cloud management platform (CMP) includes 75+ built-in integrations for rapid value and zero lock-in.

- For **Operations**, we orchestrate tools you already have plus centralize governance across teams for compliance
- For **Developers**, we enable self-service provisioning, API/CLI access and flexible 'infrastructure-as-code' blueprinting
- For **Business**, we use AI to lower cloud costs, unify people and process, plus provide a vendor strategy to put you in control

Morpheus + Rubrik automation from provisioning to protection

With Morpheus, developers can provision application stacks 150x faster across VMs, containers, and bare metal servers through a single consolidated interface. The Morpheus integration for Rubrik allows built-in protection and recovery of application instances and blueprints in the Morpheus service catalog including full API/CLI and Infrastructure-as-Code access via Morpheus, HashiCorp Terraform, CloudFormation, ARM, or HELM

A Leader in Gartner's 2019 Magic Quadrant for Cloud Management Platforms

"Morpheus Data has one of the most fully featured cloud management solutions, with strong offerings in all the key functional areas." - Gartner

Advantages of the Morpheus and Rubrik Integration:

- Assign Rubrik data protection to Morpheus managed clouds
- Self-service provisioning and data protection in one place
- Leverage Rubrik's single SLA policy engine at provision time
- Full logging of all activity across both platforms

Eliminate tool sprawl

Self-service is the core, but Morpheus goes beyond to address all CMP functions in a single platform.

- **Analytics:** reduce cloud costs by 30% with discovery and guided rightsizing
- **Governance:** fine grained role-based access, quotas, and policy enforcement
- **Automation:** enable CI/CD pipelines with integration into DevOps tool chains
- **Production:** give developers access to day-2 ops like monitoring, logs, backup, and scaling

Centralize life-cycle management

Morpheus provides everything to manage application deployment from start to finish. Easily move from Dev to Test to Production including phase based automation for clean up when machines are decommissioned and a jobs engine for day-2 tasks.

Provisioning wizard to assign Rubrik SLA policy to a new application instance from within Morpheus

About Rubrik

Rubrik, the Multi-Cloud Data Control™ Company, enables enterprises to maximize value from data that is increasingly fragmented across data centers and clouds. Rubrik delivers a single, policy-driven platform for data recovery, governance, compliance, and cloud mobility.
